

DAIRY BLENDS

Apart from making grain mixes and pelleted feeds for your dairy herd, Ridley also manufactures a range of blends. This includes feeds suitable for all stages of production.

The blends use a combination of chopped forages, co-products and pelleted feeds to provide nutrient packages in a convenient, easy to feed form for your dairy heifers and cows.

Designed to be fed as a total mixed ration (TMR) or partial mixed ration (PMR), the blends remove the need for mixing facilities on the farm.

The proportions of chopped forages are adjusted according to individual farm requirements, with additional nutrients supplied as pellets. The pellet range includes energy, protein, mineral or transition feed formulations.

Molasses is used in the blends to help reduce separation of the individual ingredients.

*Customised blends
for all stages of the
production cycle.*

RIDLEY DAIRY BLENDS

The Ridley range of dairy blends provide a simple and effective way of delivering crucial nutrients to cows. Our Dairy Team provides leading edge nutritional advice to ensure these nutrients can be supplied to optimise the financial benefit of feeding a balanced diet.

Our dairy blends include:

BLEND:

• Transition Blend

A total mixed ration (TMR) specifically formulated to provide the correct nutrient balance for high performing dairy cows in the transition period. The ration will cover energy, protein, mineral and vitamin requirements along with appropriate DCAD levels.

Feed to your springing herd for 21 days up to calving. Recommended intake varies according to cow size – typically 12 to 18 kg per cow per day.

• Heifer Blend

A flexible ration for either young cattle as a TMR or partial mixed ration (PMR) or lactating cattle as a PMR. Feed rates will vary accordingly based on requirements.

• Seasonal Milking Blend

PMR rations designed to be used in conjunction with other forages and concentrates at a variable feed rate. Feed rates will vary accordingly based on requirements.

• Dry Cow Blend

Designed to maintain body condition and cover late pregnancy requirements from drying off until 21 days before calving. This blend can be used as a TMR or PMR.
